

To the FCC Commissioners,

OnlyInternet began supplying wireless broadband in Northeastern Indiana as early as late 1997. Having grown with this industry, we are well aware of the limitations of the current spectrum that is authorized for use in unlicensed broadband deployment. The ability to penetrate foliage is a major obstacle in a broad scale coverage of our areas. Many of our potential customers can not receive our service due inefficient frequency propagation caused by interference and obstacles.

We support the comments of the Wireless Internet Service Provider's Association. We fully support the consideration of using the TV White Spaces Bands for use for more efficient wireless broadband deployments. We also recognize the concerns of interference from the public safety groups and the television channels. We are fully supportive of avoiding the public safety band but seek more efficient use of the television unused spectrum. We have communication needs in this country that can be met with spectrum that is currently unused and wasted. Digital TV will only increase this wasted spectrum. We applaud the efforts of the FCC commission in recognizing this spectrum for its usefulness and recognizing the efforts of WISPs across the country in making efficient use with the "junk" spectrum we have been allowed to use so far to solve communication needs for businesses and people that were in dire need of broadband.

Respectfully,
Rick Harnish
President
OnlyInternet Broadband & Wireless, Inc.
